## **EXECUTIVE SUMMARY**

The United States (U.S.) Army is conducting qualitative assessments at operational ranges to meet the requirements of Department of Defense policy and to support the U.S. Army Sustainable Range Program. The operational range qualitative assessment (hereinafter referred to as Phase I Assessment) is the first phase of the U.S. Army Operational Range Assessment Program. This Phase I Assessment evaluates the operational range area at Marion County Fairgrounds Training Area (TA) to assess whether further investigation is needed to determine if potential munitions constituents of concern (MCOC) are or could be migrating off-range at levels that may pose an unacceptable risk to human health or the environment. In conducting the Phase I Assessment, MCOC sources, potential off-range migration pathways, and potential off-range human and ecological receptors are evaluated as appropriate.

Marion County Fairgrounds TA encompasses approximately 57.11 acres in Marion County, Illinois, approximately 16 miles northeast of Centralia, Illinois. Marion County Fairgrounds TA is privately owned by the Marion County Fair Association, Inc. The Illinois Army National Guard (ILARNG) entered into a lease agreement with the Marion County Fair Association, Inc., in September 1996 to utilize the property as a local training area. According to the Army Range Inventory Database-Geodatabase (2006), the site is identified as a light maneuver/training area and has been used almost exclusively by the 3rd Battalion, 123rd Artillery, ILARNG. The site has the capacity to host battery-level weekend training events, consisting of artillery crew drills and bivouac training. No ILARNG training activities currently are conducted at Marion County Fairgrounds TA. Historical munitions use at the site by the ILARNG has included small caliber blank munitions.

A review of available records and background data, as well as interviews with ILARNG personnel, indicates that training activities at Marion County Fairgrounds TA have not involved the use of military munitions except for small caliber blanks. Small caliber blanks contain no projectile and are not considered to be a source of MCOC. Potential sources of MCOC were not identified at Marion County Fairgrounds TA; therefore, potential off-range migration pathways and potential off-range human and ecological receptors were not evaluated. The one operational range area located at Marion County Fairgrounds TA is categorized as Unlikely.

Installations with operational ranges where no munitions or only small caliber blanks have been utilized are categorized as Unlikely. That is, based on a review of available information, there is sufficient evidence to show that due to the lack of munitions use there are no known releases or source-receptor interactions that could present an unacceptable risk to human health or the environment. Ranges categorized as Unlikely are required to be re-evaluated at least every five years. Re-evaluation may occur sooner if significant changes (e.g., change in range operations or site conditions, regulatory changes) occur that affect determinations made during this Phase I Assessment. **Table ES-1** summarizes the Phase I Assessment findings.

**Table ES-1: Summary of Findings and Conclusions for Marion County Fairgrounds TA**

Category	Total Number of Ranges and Acreage	Source(s)	Pathway(s)	Human and Ecological Receptors	Conclusions
Unlikely	One operational range; 57.11 acres	No source—no current or historical use of live-fire military munitions	Not evaluated (no source identified)		Re-evaluate during the five-year review.
